

Penetration Testing

CONTAIN THE CHAOS

We uncover vulnerabilities by simulating real-world cyber attacks. We excel at spotting potential threats and giving you practical tips to boost your security. This service upgrades your defenses, making your cybersecurity both efficient and effective.

PROACTIVE PLANNING

Our team ensures comprehensive penetration testing that keeps you in the loop at every stage. Our experts don't just test your defenses. They come back with invaluable next steps, providing you with the insights needed to strengthen your security.

STRATEGIC LEADERSHIP

A proactive approach to security is key to thriving in today's business environment. We empower your team to anticipate and mitigate risks before they become critical. We help you turn potential security threats into opportunities for growth and competitive advantage.

Tired of dealing with all these pains?

Over Priced Testing

Requires significant investment for both setup and ongoing execution

Hard to Scale

Difficult to adjust with the evolving scale of business infrastructure

Resource Draining

Heavy reliance on both technological and human resources for comprehensive testing

Data Management Concerns

Potential for mishandling sensitive information, leading to security and privacy risks

We make it simple.

Cost-Effective

Minimizing both upfront and ongoing investment.

Scalable

Growing and adapting as your business needs evolve

Resource Efficient

Reducing the overhead of infrastructure and administrative support

Secure

We ensure the utmost security and confidentiality of your data, maintaining a closed-loop process throughout our penetration testing

Custom Penetration Testing

We view pen testing as a spectrum. On one end, you have the bare minimum—a quick, surface-level scan to check a box on a compliance form. This is the equivalent of turning the knob of your front door to see if it is unlocked. It serves a purpose, but it won't catch the clever, persistent threats lurking in the shadows.

On the other end, there's the full-blown, deep-dive pen test—a thorough, no-stone-turned examination of your entire system. This is where we get into the nitty-gritty, uncovering hidden vulnerabilities that could be exploited by determined attackers.

Our approach to penetration testing is all about scale and precision.

Whether you need a basic assessment to meet regulatory requirements or a comprehensive analysis to uncover every potential weakness, we've got you covered. We tailor our methods to your specific needs, ensuring that we provide actionable insights that are both relevant and critical to your security posture.

No matter the level of pen testing you choose, we always deliver our findings with a clear game plan on how to fix the problems we uncover.

PLANNING

During the planning phase, the consultant identifies the scope of the project, the objectives, and the budget.

PREPARATION

This includes gathering penetration testing tools, equipment, documentation, and other materials needed to conduct the test.

EXECUTION

The consultant will perform various activities during the test, such as vulnerability scanning, enumerating, exploiting, mapping, re-configuring, and monitoring.

REPORTING

After the test is completed, the security professionals prepare a report detailing findings and recommendations.

About edgefi

Cybersecurity and IT are more than just an expertise. Whether you're a client, a partner, or a team member, we always strive to put people first. People first means effective solutions to real problems, communication on a human level, and an extra level of attention to detail to ensure the best possible experience for everyone involved.

What Matters Most

Since our founding in 2006, we've been on a mission to make IT simple for our clients to manage. We're built on a solution-driven approach, putting people first, and backing them with the best technology out there.

As we looked forward in how to continue to best serve our clients, we saw a glaring trend. Cyber threats are growing at a rapid pace and organizations, regardless of size, struggle to effectively protect their data, their customers, and their bottom line. We decided to leverage our deep experience in IT and focus on creating a more secure world. Our mission now is simple – Simplify Cybersecurity.
